

All About Classroom Management

WHAT?

Classroom management is any technique that teachers use to facilitate instruction and make sure that students are learning most efficiently in a smooth classroom environment. Classroom management can look different in all different classrooms, but the common goal is to have an organized, productive, and safe environment for students in the classroom.

WHY?

Having a structured system in which expectations are set for student behavior in the classroom can help to manage the class environment most effectively, ensuring that students are being held accountable for their actions and behaviors.
